Lamp Batch Operation Instructions:

- A phone can only connect to one remote control (APP).
- Recommend a lamp (APP) connected to less than 64 slave lamps.
- Prerequisite for lamp batch operation: All lamps that have been successfully connected with the remote control can be operated.
- Configuration table: Can be modified to a unified configuration table.
- Automatic DMX address: According to the modified configuration table, such as modified to configuration table for 1, if there are 10 lamps, i.e. DMX address, the address is assigned as 1/17/33/49/65/81/97/113/129/145.
- Working mode: Uniformly modify the working mode, such as from 2.4G uniformly modified to APP, and then to modify from APP to 2.4G, need to manually modify each lamp.
- All Disconnect: All the lamps connected with this remote control are disconnected, if you want to control again, you need to re-pair.
- Reset all: It means the lamps connected with this remote control are reset uniformly.
- Turn off all: All lamps connected with this remote control are turned off.
